Subject: FW: Draft Abstract Pilot study for SOT 2002

Rick,

I have made one suggested addition to the abstract, simply for clarity's sake, and have indicated a question regarding one of the p values cited. These are indicated in the word file attached. I do have a point of concern that I would like to bring up. The abstract ends by stating, "...we conclude that both CO in exhalate and the COHb measurements provide a reliable measure of CO exposure of adult U.S. smokers." I think this statement is too general. What this study has proved is that both CO in exhalate and COHb measurements can clearly differentiate between smokers and non-smokers. I fail to see how the study has demonstrated that the study has demonstrated a "reliable measure of CO exposure of adult US smokers." Of course, this is only my opinion.

Thanks.

Ted

Here's another rush manuscript for the Feb 1 SOT deadline. It has not been reviewed outside Roger's group yet.
Comments?

[REDACTED]
Abstract Kinser for
sot2002 ve...

Dear Rick,

please find attached the draft abstract of a poster on the Pilot study to be presented at the SOT meeting 2002. As you know the deadline for submission of abstract is Feb 1, 2002. So this going to be a fast track procedure. I am sorry for this, but at present I do not find another interesting meeting in spring/summer 2002, which could be an alternative to the SOT
